HIS MAJESTYS STATE PAPER OFFICE

TIONS of the FORT at PE^{N}SACOLA. 1763.

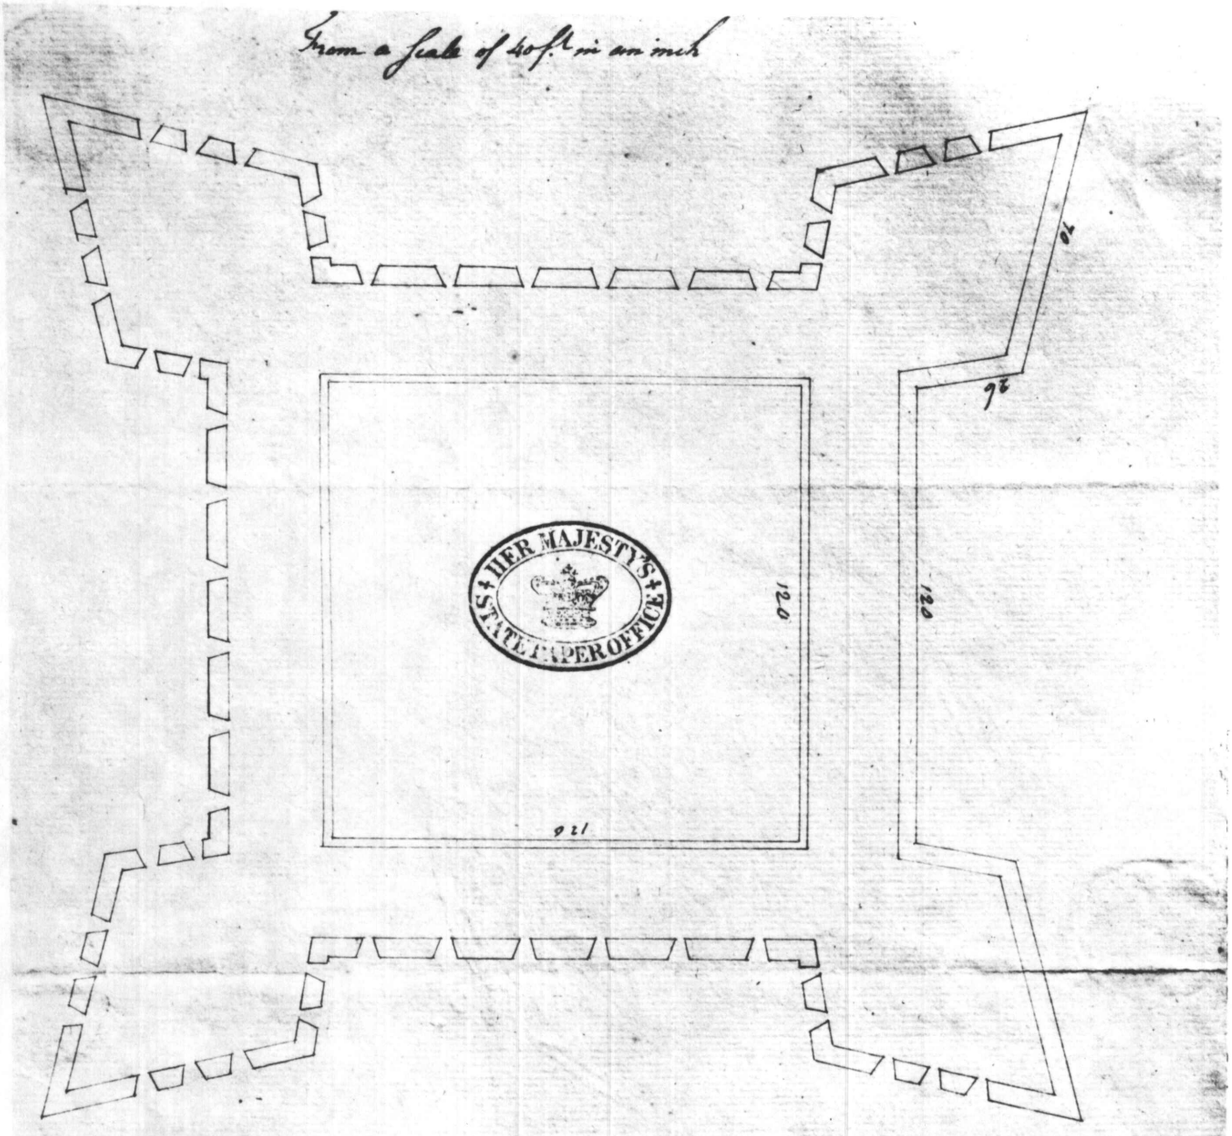

HIS BRITANNIC MAJESTY'S STATE PAPER OFFICE

III

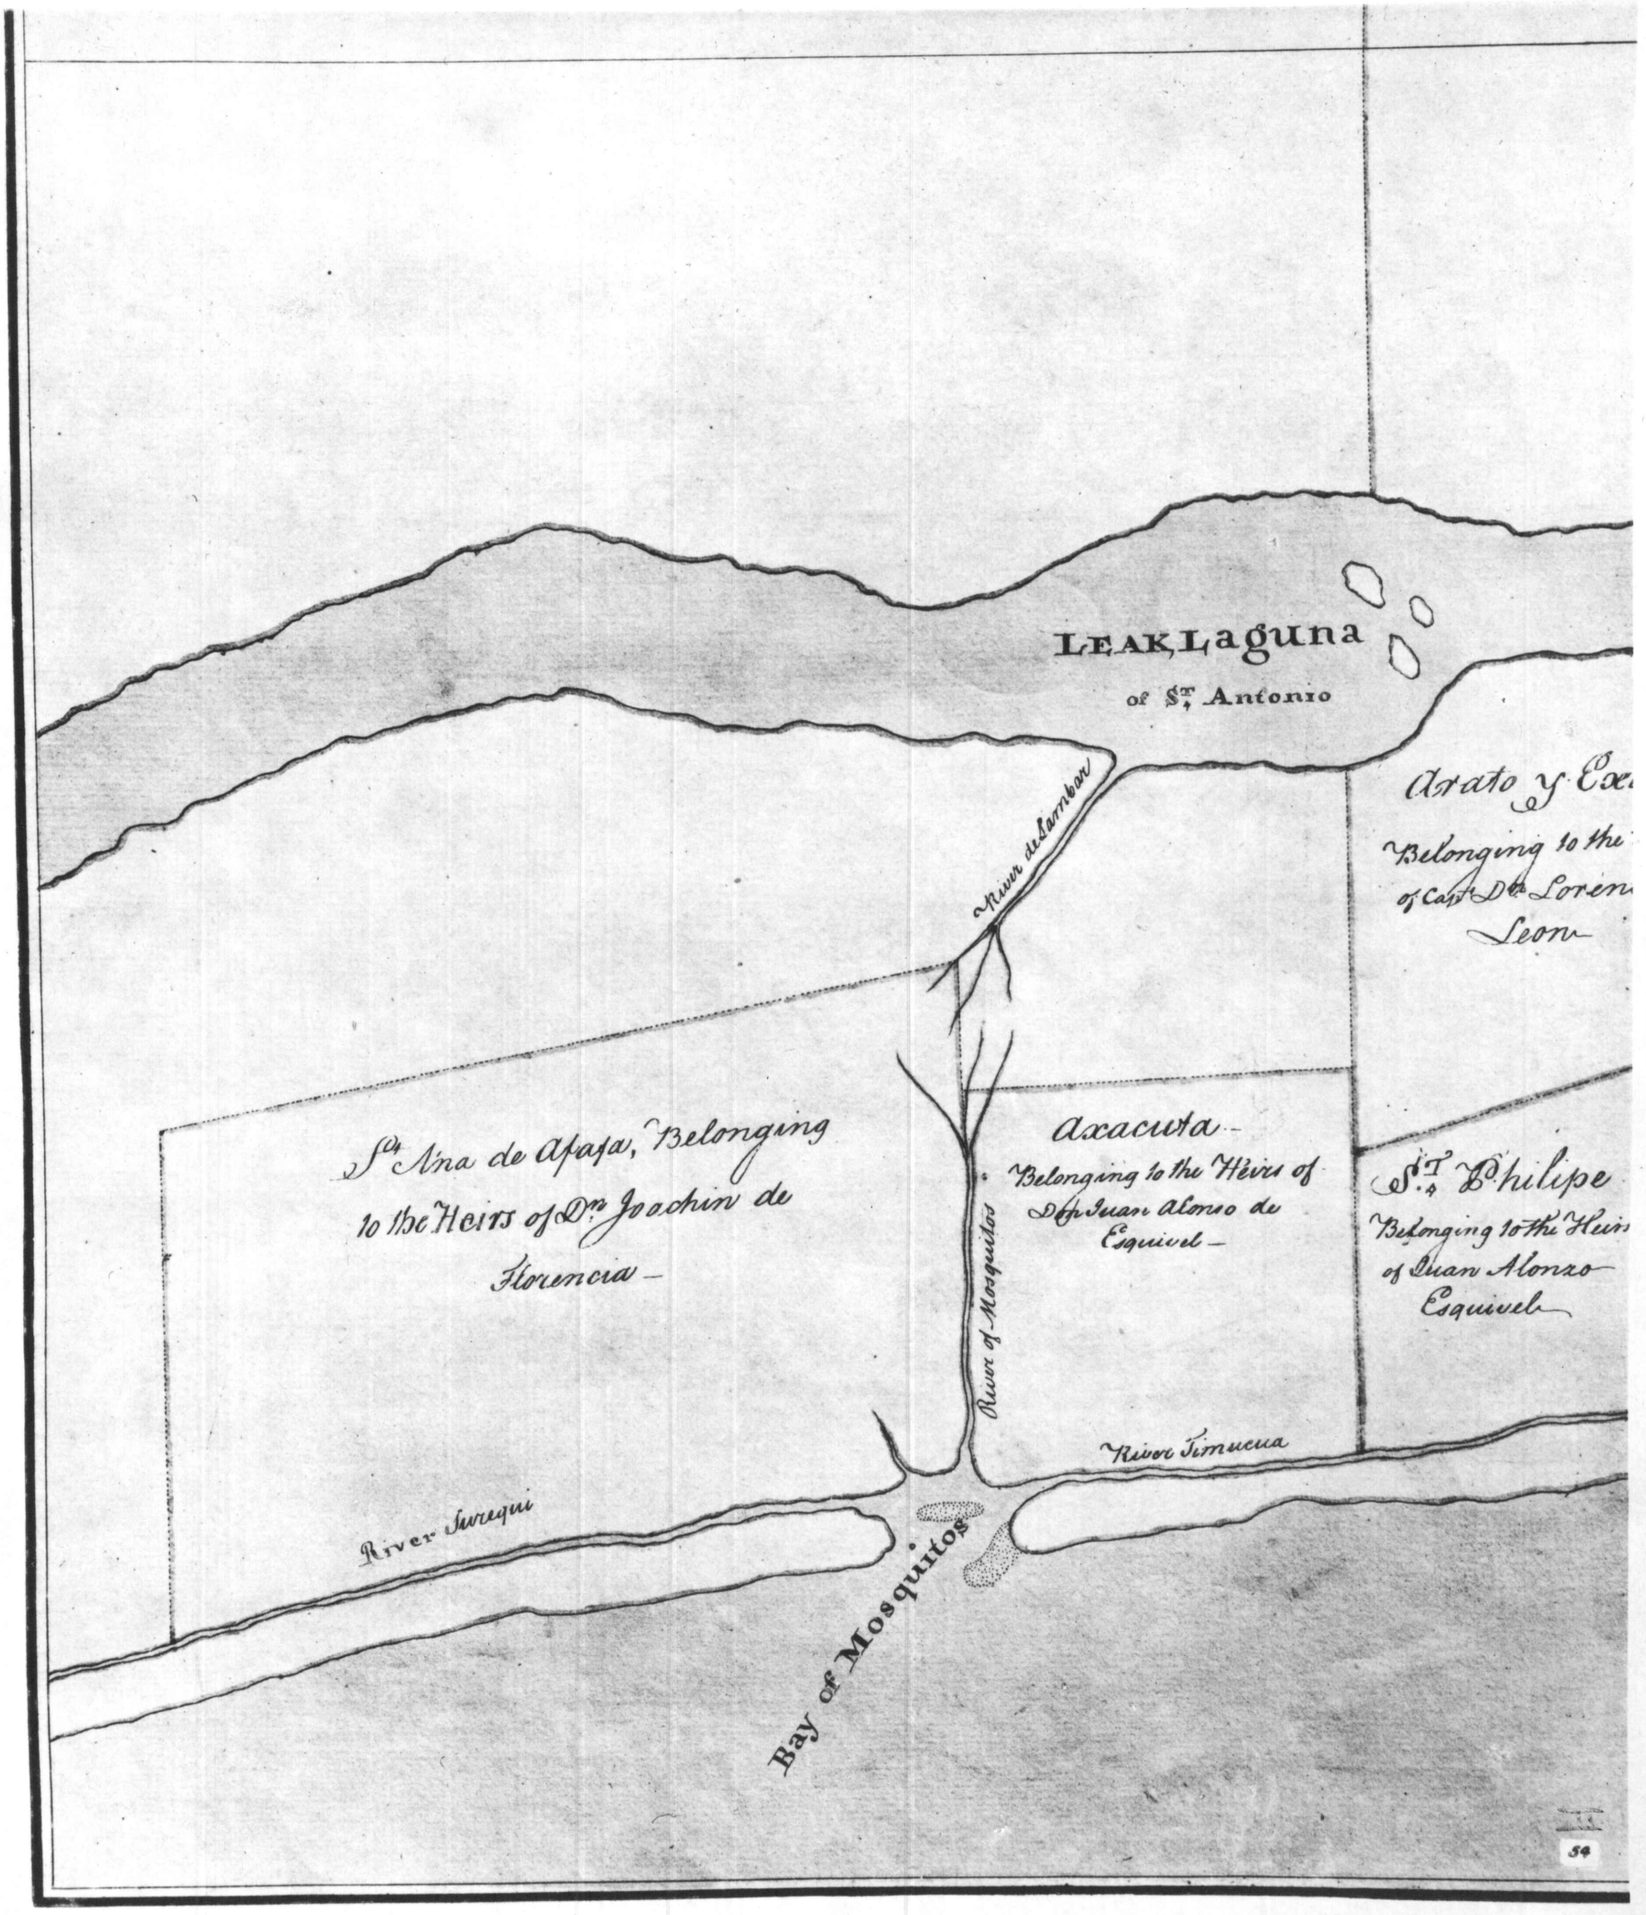

52

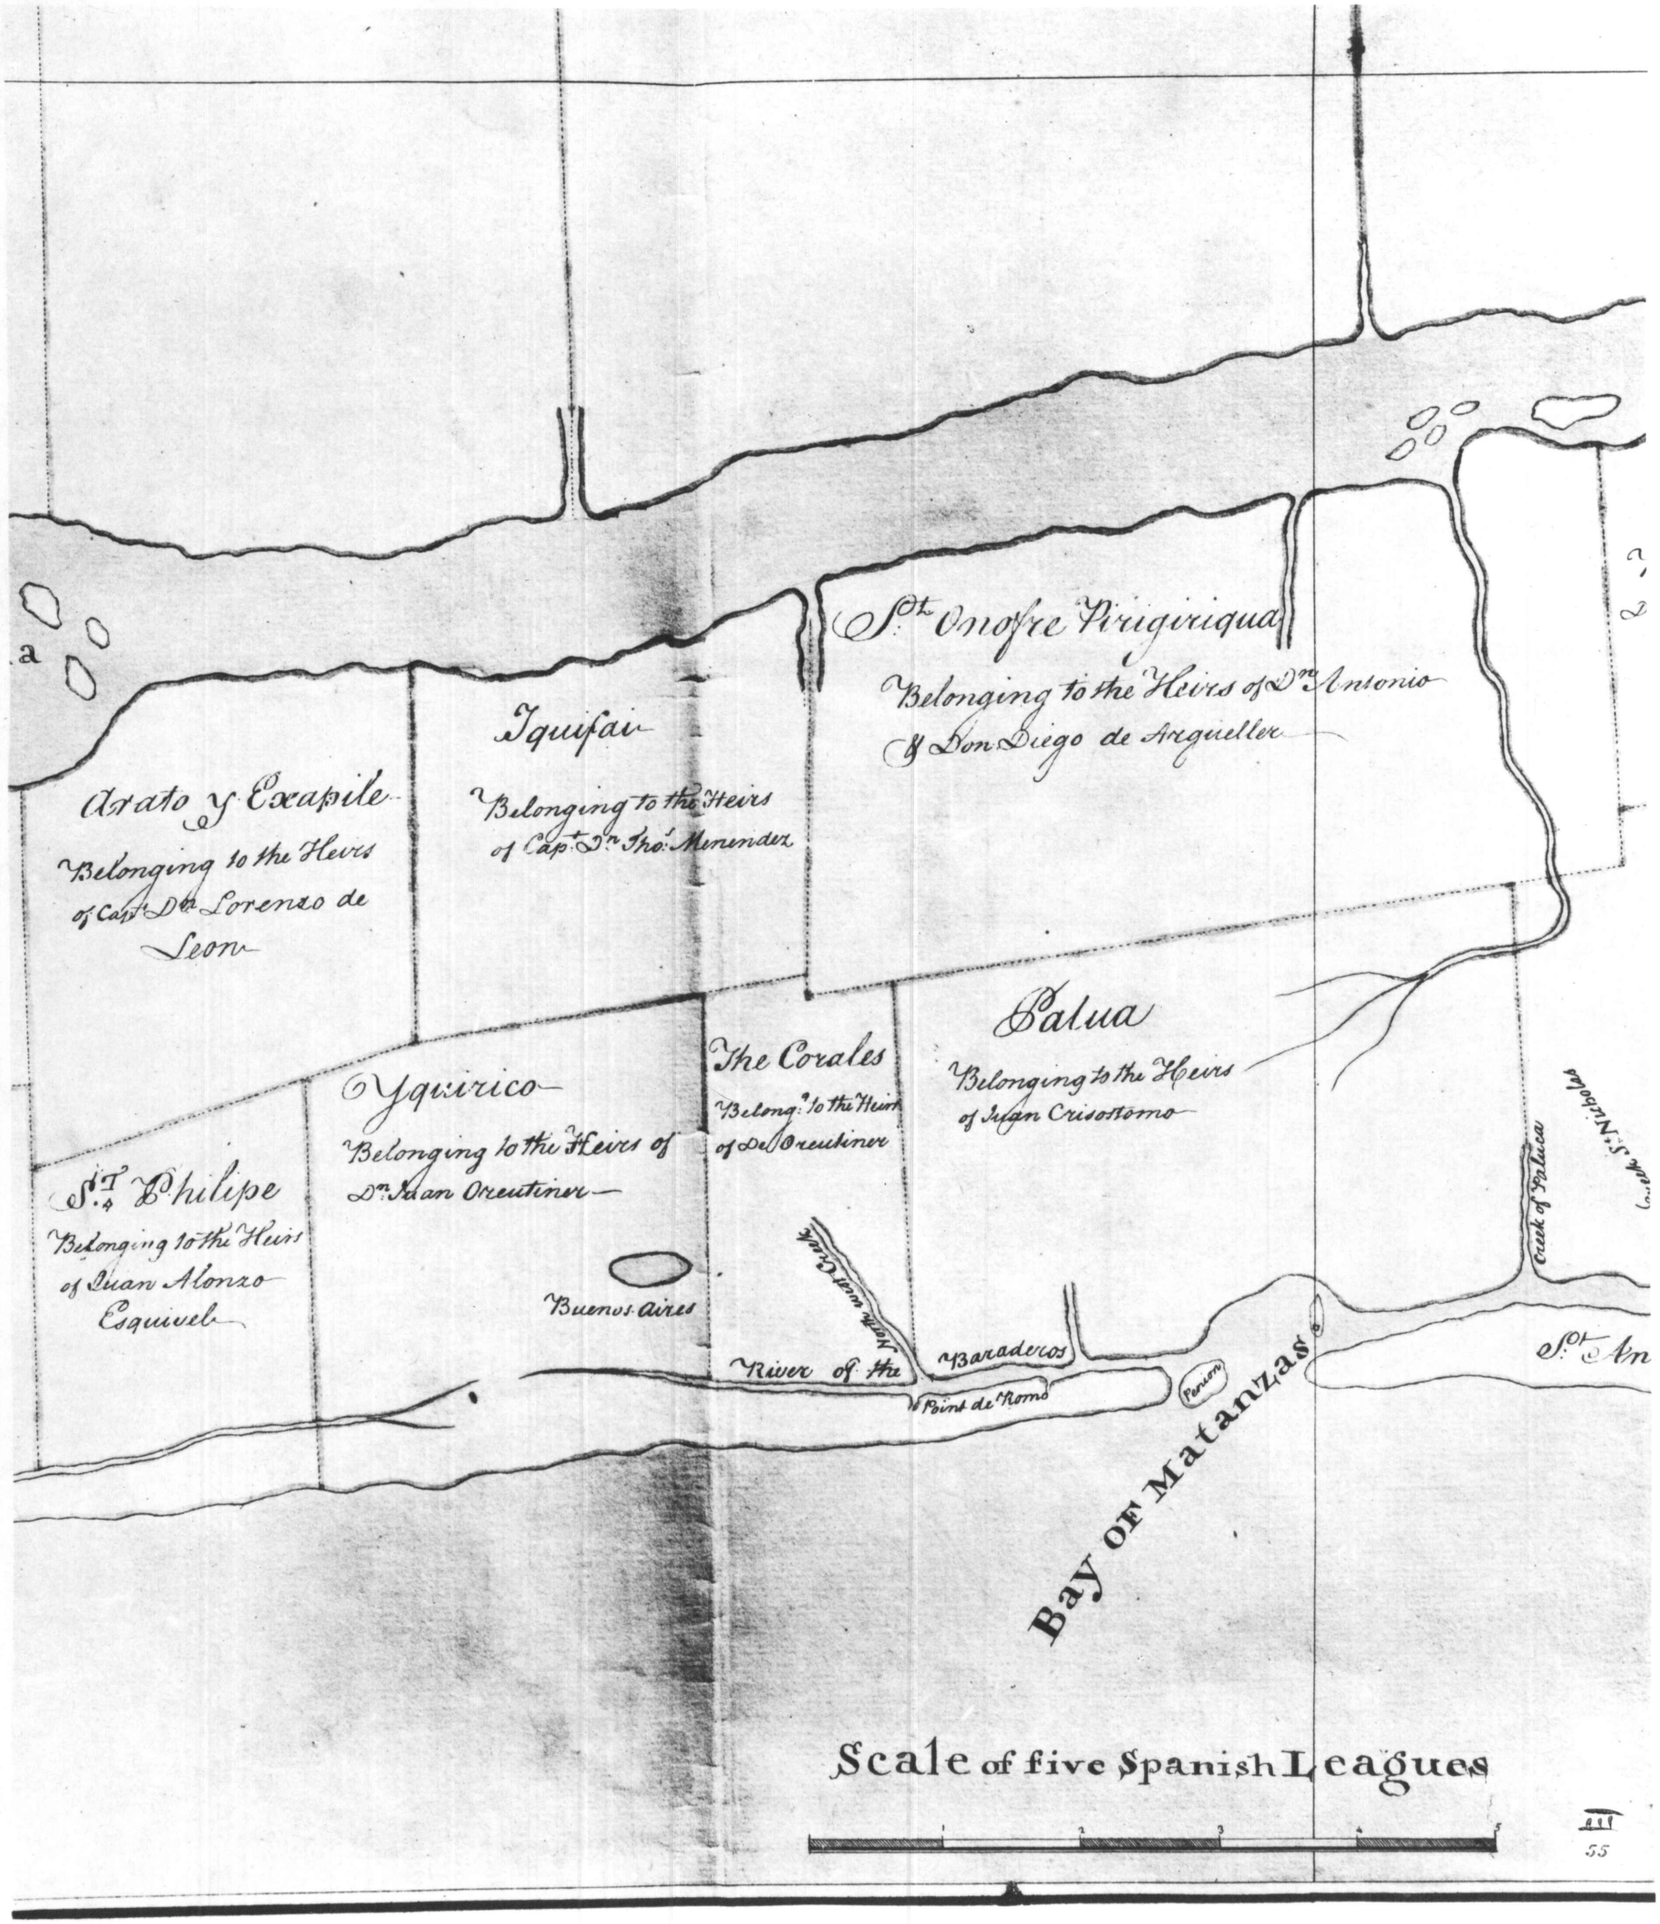

From a scale of 40 f. to an inch

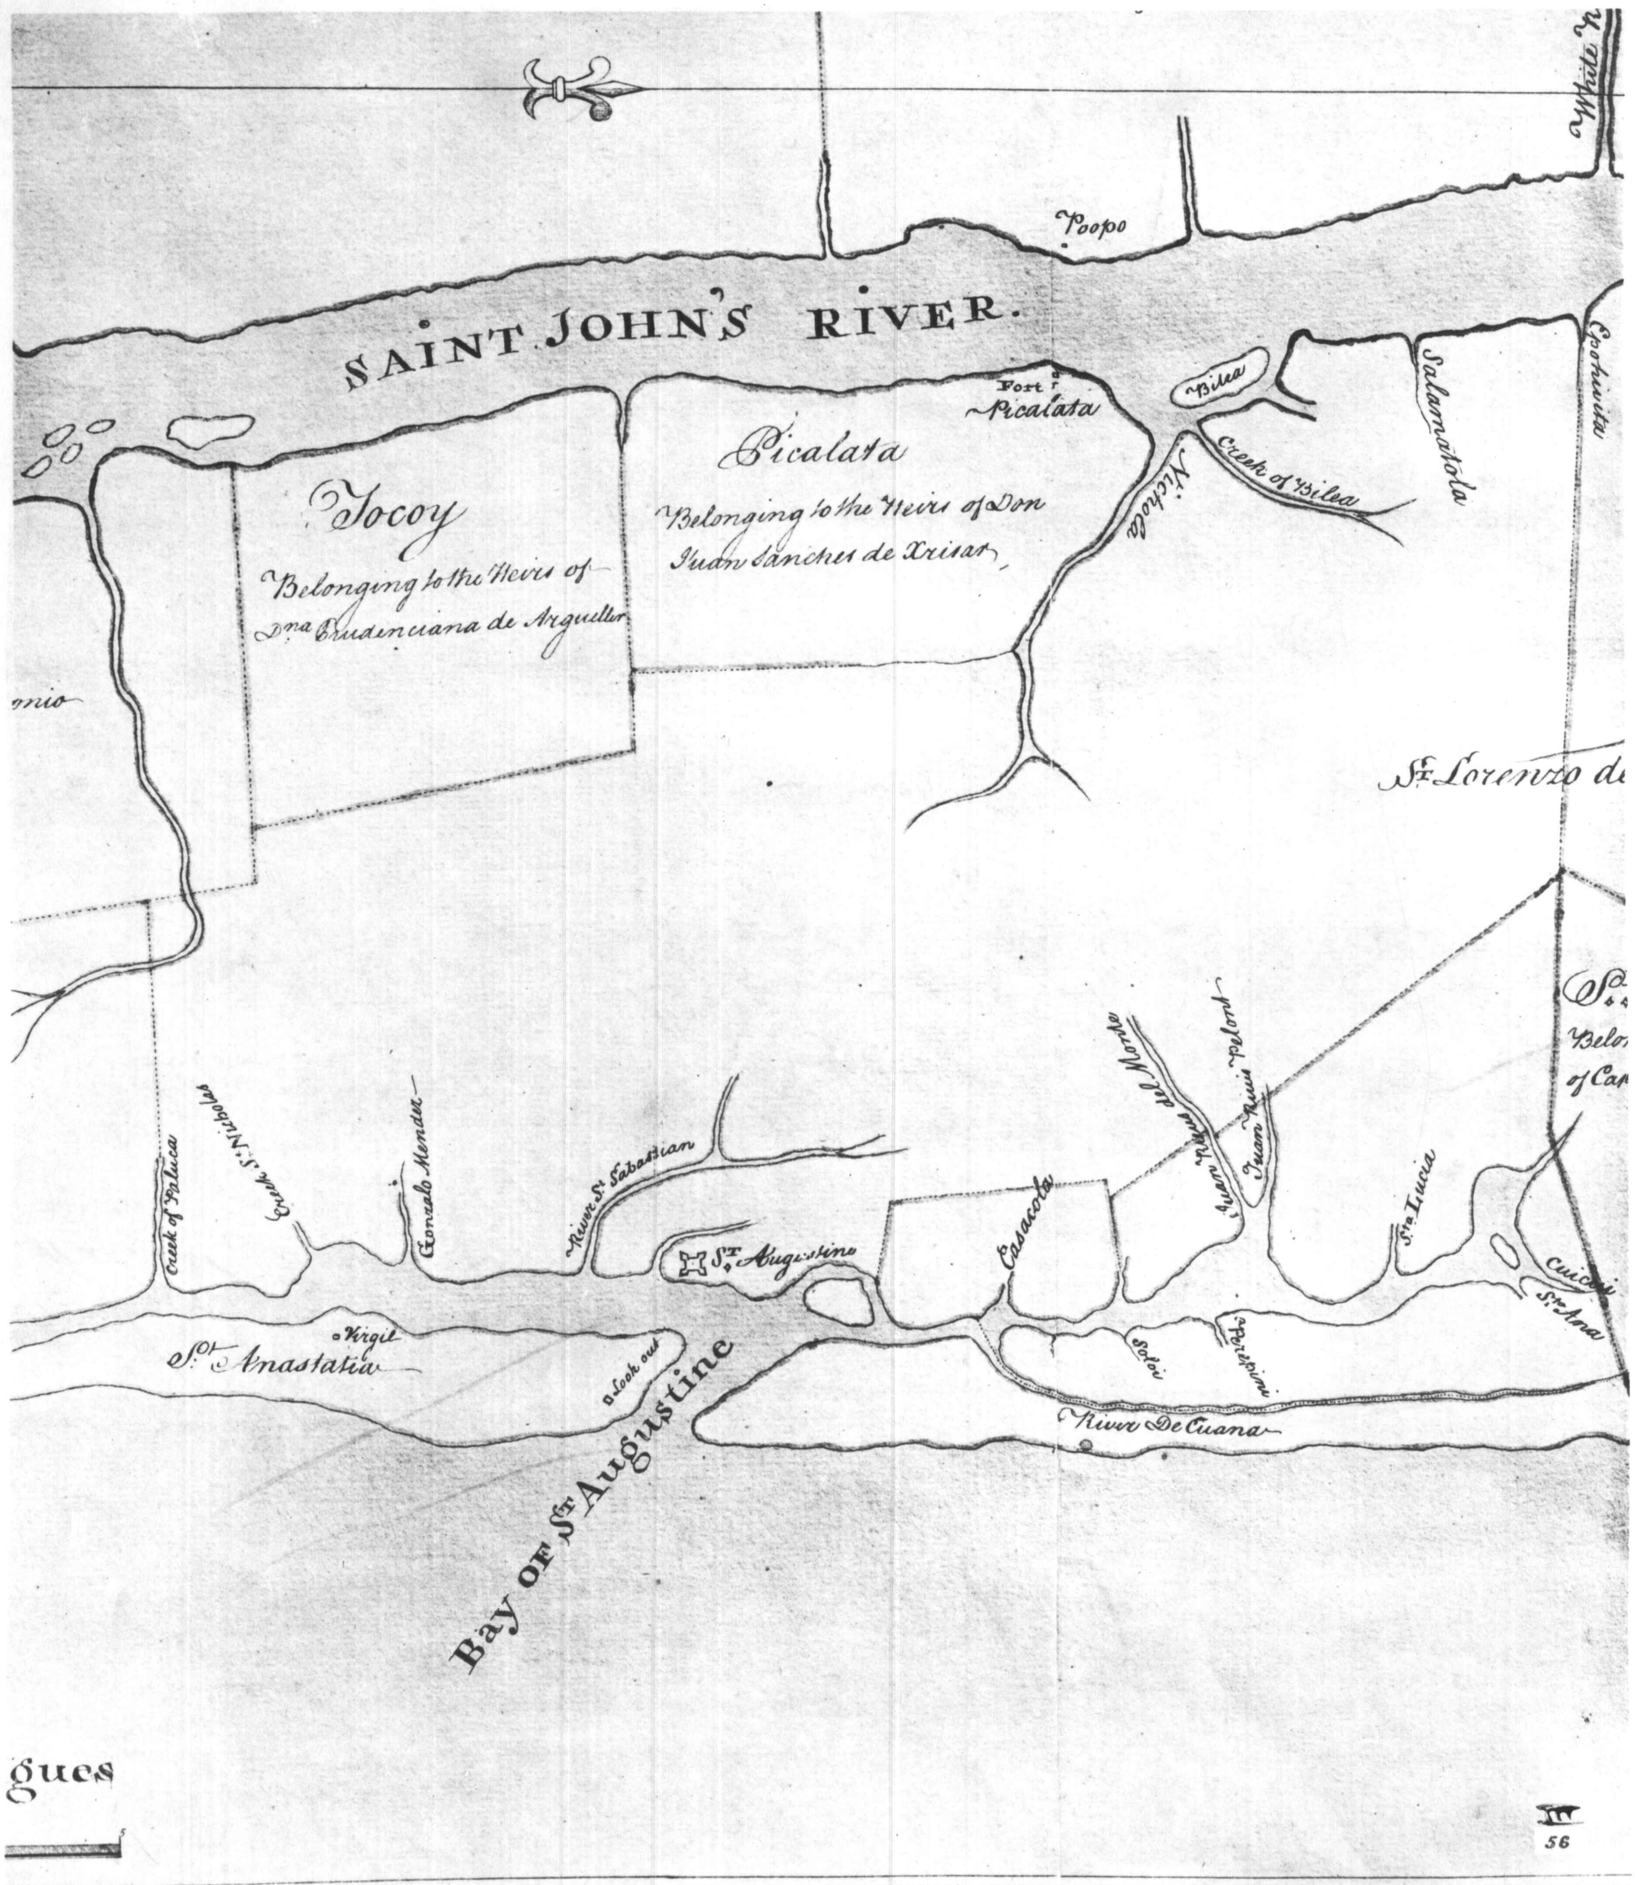

Above is a sketch of the Castle of St Augustin, altho I had the liberty to go all over it, I could easily perceive it was disagreable to the Spaniards, when I seemed to take too particular notice, Therefore these Dimensions are not altogether to be depended on, especially the Flanks, and faces, which appear to me now when on paper to be too short — On the Curtain, flanks, & faces towards the Sea, where there are no Embrasures, the Cannon play en barbet — There were Seventy two peices of Cannon mounted in all — The Rampart & parapet I guess to be about thirty five feet thick, and fourty feet high, from the bottom of the ditch, built of congealed Shells dug out in the shape of Stones from a Quarry on the opposite Island of Anastasia — The Walls are all Arched & formed into a number of large & Commodious apartments, which open into the Area, & consist of a Chapell a state room, an Armory, Magazines for provisions Artillery, & warlike Stores Guard rooms, Prisons &c. — The ditch has its Counterscarpe & Covert way with a well built ravelin before the Curtain next the Town in which is the Gate — The Situation of St. Augustin is low & surrounded by water & Marsh, yet it is remarkably healthy, — The Town is small & ill built

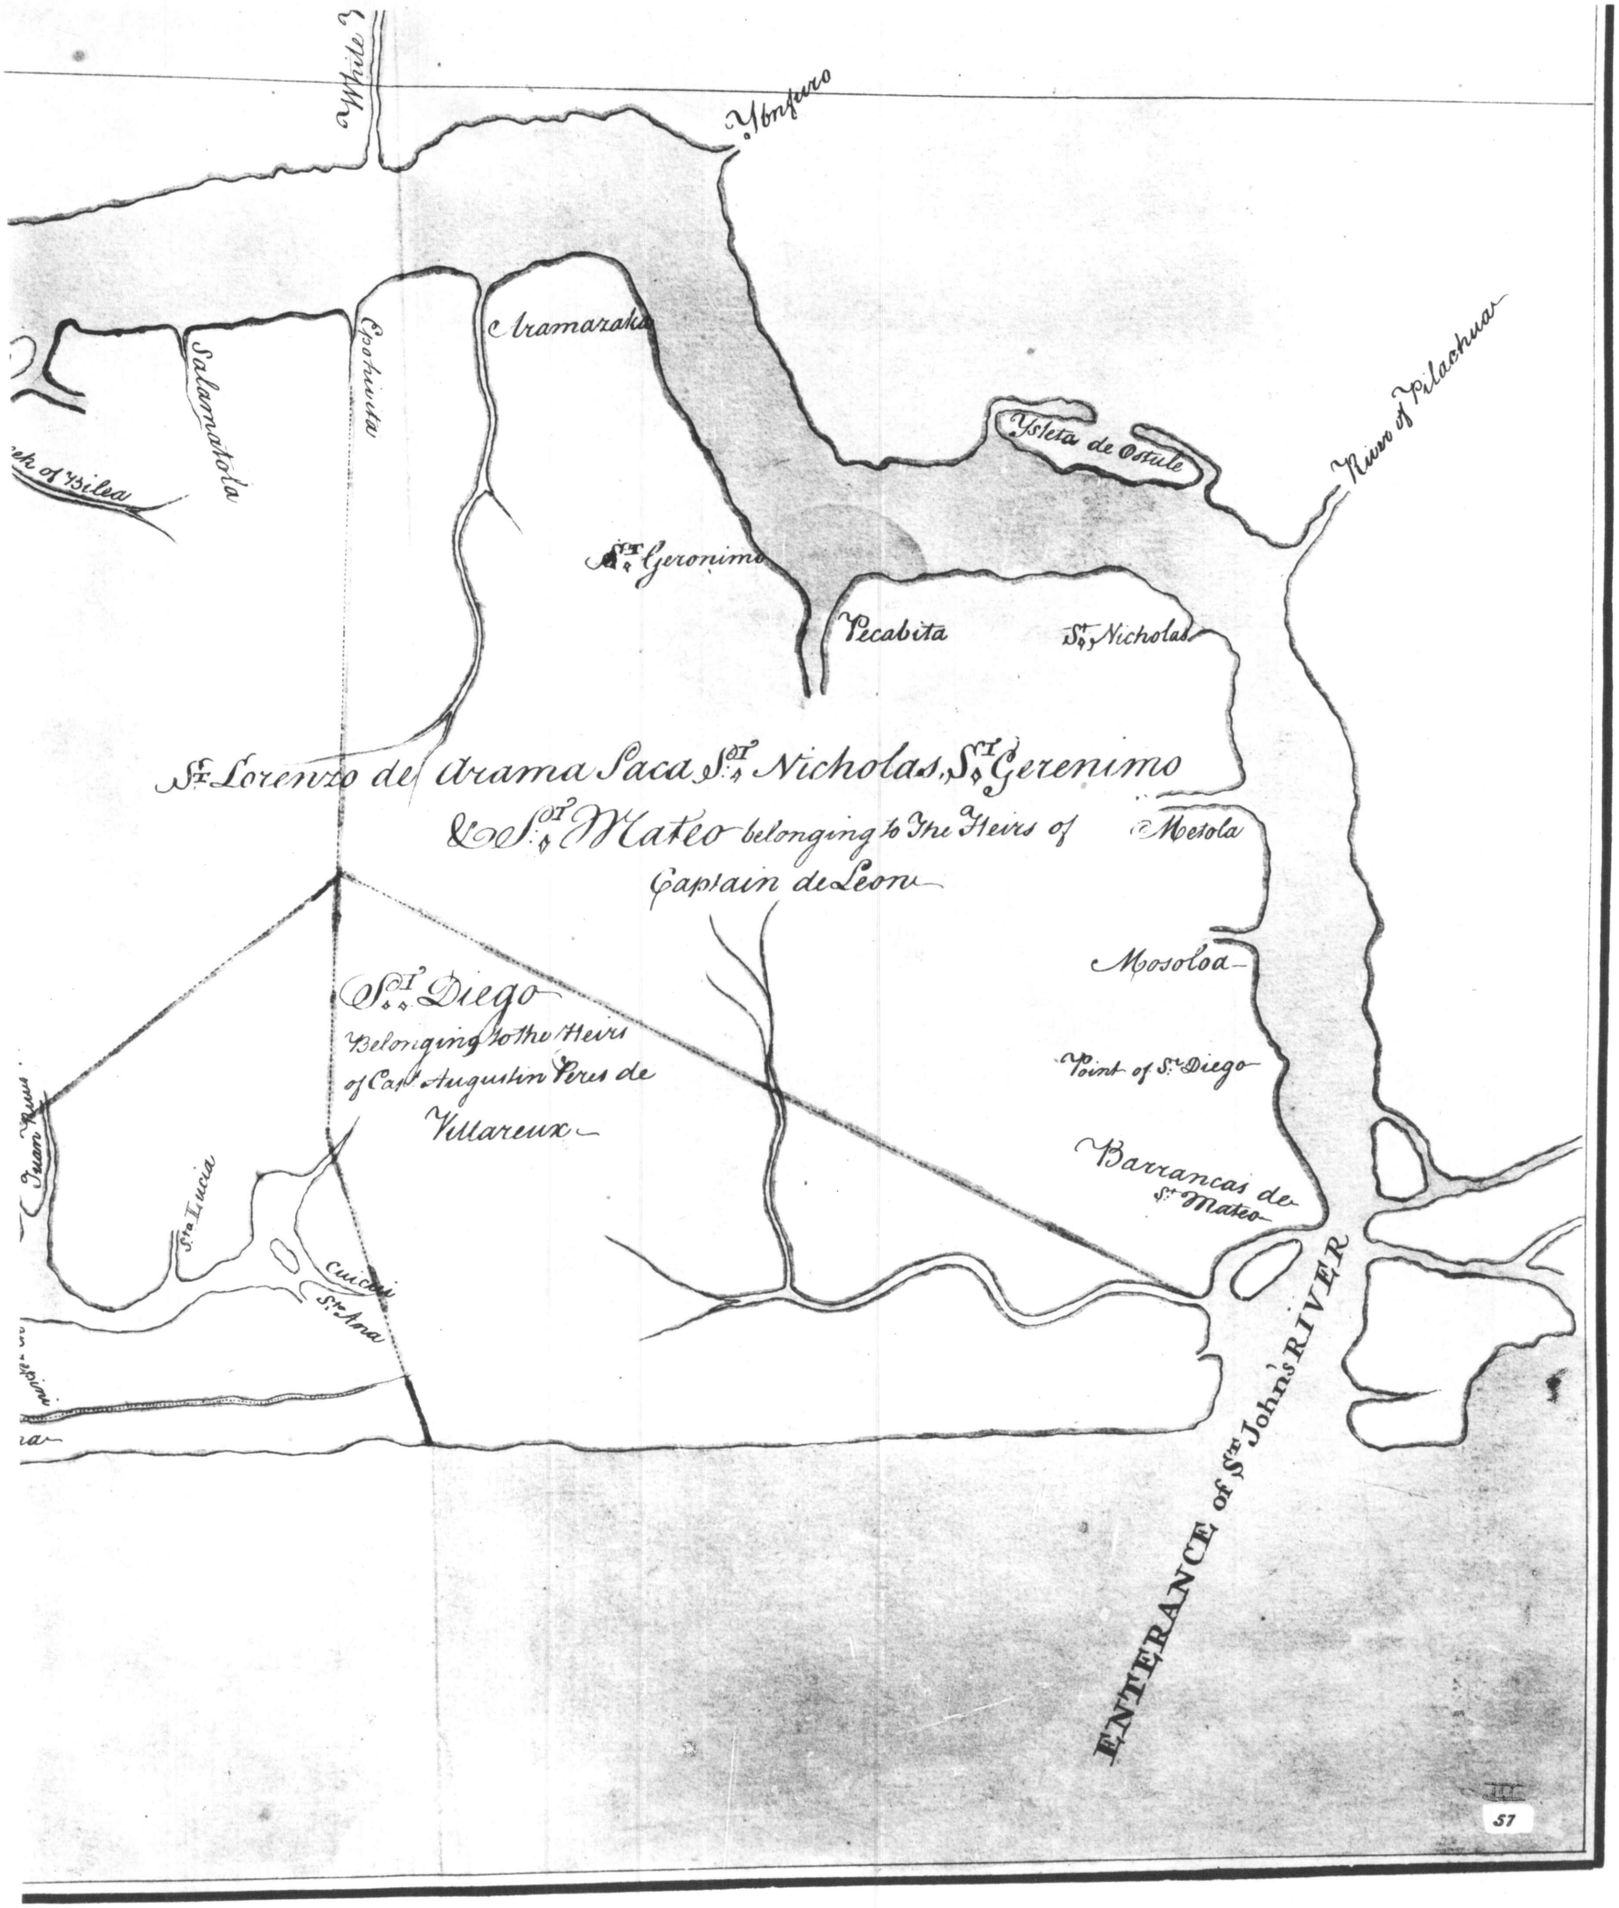

and has one Convent & three Churches, the number of inhabitants is computed at 3500 but they are mostly Women & Children the Men in the Town are all Soldiers — There is little or no Horn Cattle kept within the Bar, for which reason & Milk it can never be a place of great Trade, tho' it may be of much importance to us.
