CONTRIBUTOR/AUTHOR ADDRESSES

INTRODUCTION

In 1980 the North Carolina Archaeological Council published the first in a series of bibliographies on the archaeology of North Carolina. Appearing as **Publication 13** in the Council Series, "A guide to research papers in the archaeology of North Carolina on file with the Archaeology Branch of the North Carolina Division of Archives and History" contained 661 titles of papers, articles and reports. Most of these works, which cover archaeological projects throughout the state, were unpublished. In 1981 and 1982, the bibliographic series was updated with Addenda I and II, **Publications 14** and **17**, respectively. Addendum III followed with 230 entries in 1984 as **Publication 21**. Since the publication of those bibliographies, the Branch's collection of master's theses, articles and research and contract reports has continued to grow, prompting the compilation of the fifth bibliography, **Publication 23**. Addendum IV represents the receipt, through the cut-off date of March 31, 1985, of 240 titles by 82 authors.

As in the preceding bibliographies, the works listed represent a wide variety of research topics, techniques, purposes and formats. The geographical focus varies from surveys of one-acre tracts to overviews of several counties. Papers 'missed' by earlier bibliographies, or received long after their completion have been included if they came in during the accumulation time for this addendum.

In each citation we have included the name and address of the individual, institution or agency that performed the work described in the report after "manuscript on file." This referencing format supplies the researcher with the information needed to contact the individuals or institutions retaining not only the manuscript cited, but also (presumably) the notes, photographs and artifacts generated by the project in question. Specific inquiries and requests for copies should be addressed to these individuals or institutions. Addresses of most of the contributors have been abbreviated in the citations; a full list of contributors' addresses appears in the appendix.

The entry format has been adapted from that prescribed by the style guide for **American Antiquity**, (1983) to include pertinent information such as edition (e.g., draft, preliminary, final), pages, number of sites located and survey coverage in acres (when provided by the reporter.) Believing that researchers are more concerned with place than author, we have organized the bibliography by physiographic region and county. Entries under these headings are further alphabetized by author. Reports covering two or more counties are entered in full under the filing county (typically the county of primary focus); cross references of author, year and bibliography number are given under each additional county. An index of authors follows the county entries. The numbers listed after each author are the bibliography reference numbers appearing to the right of each title in the county section. Every writer, whether an individual or contributing author, is listed. Style variants in the original reports such as spellings of archeology and archaeology have been maintained.

The Archaeology Branch hopes that the organization of the bibliography will facilitate its use by student, researcher and contracting archaeologist alike. We urge future contributors to the bibliography series to continue reporting

in management summaries or abstracts such details as Clearinghouse number (when applicable and available; call the Archaeology Branch if in doubt), number of sites located or investigated and survey acreage. These specifics can then readily be pulled for inclusion in the bibliography entries, thus providing an abbreviated abstract for each report. These 'abstracts' will help other researchers when preparing their own works.

Based on the figures provided by you and a little mental maneuvering by the compiler, close to 37,000 acres or 57 square miles were surveyed and reported on during the eighteen months covered by Addendum IV. Approximately five hundred seventy-four sites were located. The acreage figure should be even higher, but acreage is often not clearly reported by authors. Where it could be ferreted out, it was.

The bibliography is intended to help you; the Archaeology Branch can only provide what is included in the reports. We welcome your thoughts and ideas. Because the revised format of Addendum III was well-received, it was maintained in Addendum IV.
